

SUCTION STRAINERS

Suction Strainers are fitted to the inlets of suction hose to filter out solid material when drawing water from an unfiltered supply.

All aluminium cylindrical strainers are produced in 75mm, 100mm and 140mm (3", 4" and 5 ½") sizes with standard fixed female suction round thread connections to BS 336.

For use in shallow water the aluminium slipper strainer with stainless steel mesh is used. This is produced with a 3", 4" or 5 ½" swivel female suction round thread connection to BS 336. This type of strainer can only be used where the bottom of the reservoir is solid.

Wicker Basket Strainers are also supplied suitable for use with cylindrical strainers. The baskets are fitted over the strainers to act as primary filters when the water supplied contains weeds or other debris. The wicker baskets are fitted with a green canvas apron and are available with a 40ft polypropylene rope. They are available in 3 nominal sizes: 75 mm (3"), 100 mm (4") and 140 mm (5 ½")

When ordering specify strainer type and size.

SUCTION STRAINER

Cylindrical Suction Strainer, to BS336 with Round Thread fixed female connection.

SLIPPER STRAINER

Slipper Strainer to BS336 for use in with swivel female Round Thread connection.
